HEAD AND NECK CANCER SURVIVOR SURVEY

MAKE SENSE CAMPAIGN

#StayHNCAware

Assessing the physical, social and professional impacts of head and neck cancer on survivors

The <u>European Head and Neck Society</u> through its <u>Make Sense</u> campaign and the <u>European Cancer Patient Coalition</u> have conducted a survivor survey, assessing the impact of head and neck cancer on the physical, social and professional wellbeing of survivors, and the current availability of support resources.

The survey reveals that most survivors have experienced a negative impact on their overall wellbeing; the extent of this impact is magnified in cases where there is limited access to a range of support resources.

ABOUT THE SURVEY

229 respondents from 12 countries (Belgium, Cyprus, France, Greece, Ireland, Italy, Israel, the Netherlands, Poland, Portugal, Turkey and the United Kingdom)

of respondents said HNC had slightly or strongly negatively impacted their wellbeing

EMOTIONAL WELLBEING

Survivors were impacted by a wide range of feelings – the most common were:

PHYSICAL IMPACT

Physical symptoms were reported to have the biggest impact on wellbeing, with 48% of respondents reporting a negative impact. Areas where respondents noted a negative impact included:

48% Speaking

43% Appearance

41% Eating/drinking

40% Energy

39% Taste/smell

29% Sleeping

27% Appetite

28% Breathing

SOCIAL AND PROFESSIONAL IMPACT

had been negatively impacted financially/professionally

35%

were negatively impacted by social effects

31%

experienced negative impacts on their **friendships**

30%

felt that their **hobbies** had been negatively impacted

Comments from respondents revealed a variety of experiences

'Only one couple who we were close friends with seems reluctant to include me, the rest of my friends still treat me the same.'

Survivor, UK

'After the treatment I started to work again, I ran my own business and I was working until retiring.'

Survivor, Poland

'I do not work anymore. I was over 80% disabled.'

Survivor, France

'Less mobility means I can do less and I become far more reliant on other people. I would be unable to live on my own.'

Survivor, UK

IMPACTS OF COVID-19

When asked about the impact of COVID-19 on their ability to access emotional support services:

51%

said ne

said it had a negative impact

31%

said it had no impact

18%

said it had a positive impact

SUPPORT LANDSCAPE

Results indicated survivors were fortunate to benefit from an increasingly open culture when it comes to talking about emotional wellbeing:

68% found their family and friends to be a helpful support network

88% feel comfortable talking about their emotional wellbeing with their HCP

Many survivors have access to a range of resources that they find helpful including reading materials (47%), peer-to-peer support groups (44%) and digital tools (42%)

FURTHER SUPPORT NEEDED

50% of respondants rated the emotional wellbeing support they had received as "excellent" or "good" but the survey also revealed gaps where survivors would like further support:

41% would like support from specialised nurses and social workers 33% would like more resources for carer support

Some survivors would also like more access to peer-to-peer support groups (33%), digital tools for wellbeing management (28%) and support from mental health specialists (27%).

ABOUT THE SURVEY

All figures, unless otherwise stated, are from survey results collected by the Make Sense campaign. Total sample size was 229 with results gathered from adults who had been treated for head and neck cancer in Belgium, Cyprus, France, Greece, Ireland, Italy, Israel, Netherlands, Poland, Portugal, Turkey and the UK. Fieldwork was undertaken between 8th June - 31st August 2021. The survey was carried out online and distributed to applicable respondents via email and public social media posts addressed to healthcare professionals, patient advocacy groups, and other relevant groups and individuals in the Make Sense campaign's existing network, acting on behalf of the Campaign.
